Protective rubber bumper for CipherLab RK25 with UHF RFID reader

The rubber boot for the RK25 handled device fits perfectly with its RFID pistol grip. It's quick to slip on and off, and beside it's protective feature, which is the main purpose, it also allows an easy battery replacement.

The SilverBack 25-RFID-COV is a very recommended lightweight, ergonomic, perfect overthickness, non-slip and affordable optional addition to the CipherLab RK25-RFID handheld RAIN UHF reader. The rubber boot is equipped with eyelets (3 at the bottom and 2 at the top) to hang a shoulder strap.

Nylon padded shoulder strap with metal hooks (SHOL-STRAP1) is available separately.
